

Cable Tunnel Team Embraces Summer @ Tanglin Trust School

By Vanessa Therese Koh

In an effort to create meaningful engagement with Tanglin Trust School – a key stakeholder of the Cable Tunnel Project, the Cable Tunnel team participated in the school’s Summer Fete on Sat, 18 May 2013 – an annual carnival that attracts more than 2,000 visitors, comprising students, staff and their families for a day of British fun, games and food.

Contract EW1 Obayashi Corporation sponsored the ‘Climb & Slide’ – a popular indoor inflatable game station, to help spread the carnival atmosphere at the Summer Fete, keeping hundreds of children happy and thrilled. Obayashi also engaged two professional

balloonists to captivate and draw children and parents to the Cable Tunnel booth with balloon sculptures of colourful swords, poodles, flowers and hats.

The Cable Tunnel Team set up a booth comprising informative posters that successfully highlighted the project’s benefits to all visitors at the booth; many of whom said that they are very impressed by the scale of the Cable Tunnel project and by the team’s proactive community relations effort.

“The posters were very well done, very informative indeed. We are thankful that Obayashi Corporation and Singapore Power have been very supportive and enthusiastic in participating in the Summer Fete,” said Ms Claren Chong, Senior Facilities Manager, Operations Department, Tanglin Trust School.

“It is good to finally understand what is going on behind the wall,” Ms Morren Davis, a parent of Tanglin Trust School’s student.

The Quiz proved to be a hit with the children who visited the booth as they *whizzed* around the posters in search of clues and answers for the questions. The Cable Tunnel team were at the booth, mingling with visitors and answering questions.

“All in all, it was a good experience for us. Our participation at the Summer Fete not only allowed us to share more about the project with the parents, students and staff, but I believe the visitors were appreciative that we are doing our best to keep them informed about what’s going on next to the school,” said Mr Koh Keng Boon, Principle Engineer, Cable Tunnels
